

# **THE GREATER VANCOUVER WATERSHEDS - NEWSPAPER, MAGAZINE ARTICLES, 1985-1998**

## **(IN CHRONOLOGICAL ORDER)**

1985 to 1998 is another important era in the logging controversy of the three Greater Vancouver watersheds. In the early to mid-1980's, the cumulative logging activities in the watersheds were beginning to noticeably and consistently affect the population's water quality, so much so that the Water District established a committee in 1985 and then entreated consultants to address and play down the problems. By 1988, the Western Canada Wilderness Committee began a public campaign over the issue, which was the principal catalyst for the public review of the three watersheds in 1991. In 1989, the Water District was faced with the highly publicized debate over allowing a natural gas pipeline to be placed in the Coquitlam watershed. After 1992, as a result of public input, the amount of logging began to decrease. In 1994, the Water District allowed its last and most recent commercial logging in the Capilano, which led to an almost tragic helicopter crash. A public review process began in June of 1997, and by November 10, 1999 the Greater Vancouver Water District Administration Board voted to end commercial logging in the Greater Vancouver watersheds (there will be an update to present more articles from 1998-1999).
